BACK-TO-SCHOOL: 101

Keep Kids Out of Bed & In the Classroom with Guardian Technologies® Home Environment Products

Let's face it...the new school year is upon us! For parents, that means rushing around to get every item on the supply list, a stop or two at the grocery store to stock up on healthy snacks for packed lunches, and finding new ways to keep your student in school learning, rather than at home, sick from the myriad of germs they are bound to come into contact with.

It's hard enough to get kids to roll out of bed to go to school, but ask a kid who is feeling "under the weather" from a cold, the flu or seasonal allergies, and you're fighting a battle that will soon be lost.

Unfortunately, a sick student means piles of homework, late book reports, missed tests and lackluster performance in the classroom.

However, adding a couple must-haves to your back-to-school shopping list, like an *air purifier* or *humidifier* to help improve the indoor air quality at home, can help stop the spread of germs and minimize allergies. Guardian Technologies, makers of *germguardian®* brand air purifiers and *pureguardian™* brand humidifiers, offers a full-line of products to help keep students out of bed and in the classroom.

Products to Add to Your Back-to-School Must-Have List:

1. AC4010 Table Top Air Cleaning System

This unit is small, but powerful and processes the air in a 200-square-foot room every hour. This complete air cleaning system contains four powerful layers that capture 99.97 percent of airborne allergens, kill airborne mold spores, and fight unwanted germs and odors. Comparable in size to a clock radio, it fits in with dorm room decor, can be added to a student's bedroom, or placed on a classroom windowsill without notice. *Retails for under \$70*

2. GG1000 Pluggable UV-C Air Sanitizer

Sleek and compact, the Pluggable kills more than 98 percent of airborne bacteria using safe, UV-C light - the same technology used by hospitals. It also fights odors and kills unwanted mold spores, making it an ideal addition to the dorm room. Easily plugs into any outlet to help protect against germs. *Retails for under \$50*

3. H1000 Table Top Ultrasonic Humidifier

A humidifier is an excellent addition to help with the indoor air environment during the school year. Humidifiers, like the H1000 Table Top, help provide relief from dry skin and chapped lips, help combat dry air to help keep nasal passages moist and can help reduce the risk of catching a cold or flu virus.

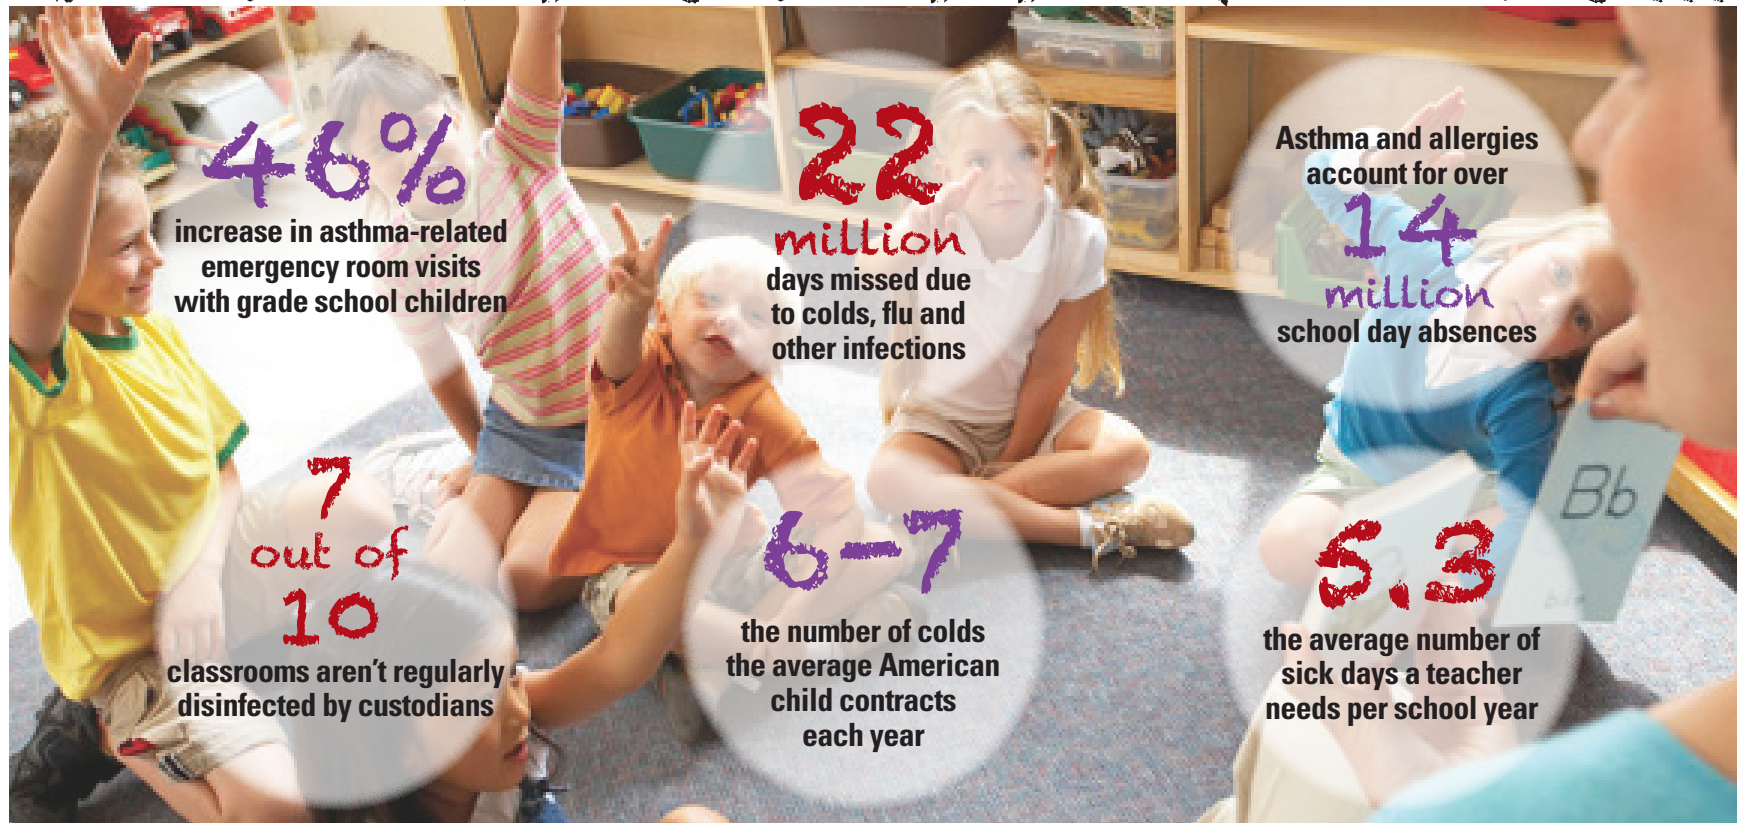

While other humidifiers can grow slimy mold, the cool-mist H1000 uses Silver Clean™ technology embedded in the water tank to help fight the growth of mold and mildew on the surface.

Ultrasonic Technology makes the unit ultra-quiet while it runs, so it won't keep your student up at night before a big test!

Retails for under \$50
